# GRAPHTEC

# Extensible Data Acquisition Unit **DATA PLATFORM GL7000** Amplifier Unit Selection Guide

## GL7000 features

- The amplifier module can be expanded to accommodate a wide variety of measurements. (Amplifier can be attached to up to 10 modules)
- Attaching the high-definition display module with a touch panel allows both stand-alone operation and embedding into a system.
- 2 interfaces to connect the GL7000 to your PC : USB 2.0, Ethernet.
- 4 destinations to save the recording data. (Built-in RAM, Built-in Flash memory, SD memory card, and SSD module)
- Software for high performance and easy operation (GL-Connection)

## Flexible amplifier module combination allows wide range of measurments

Voltage measurement for sensor

output and battery cell. (Displacement, Pressure, Wind speed, etc)

#### Voltage Module GL7-V

Voltage

10ch/unit

1kS/s Simultaneous sampling

Simultaneou

sampling

- 10 channels / unit
- Maximum input voltage 100V

## High Speed Voltage Module GL7-HSV

MAX

1kS/s

(1ms)

- 1MS/s High speed simultaneous sampling
- 4 channels / unit Maximum input voltage 100V

DC Strain N	lodule	e GL	7-DCE	3	NEW
	Strain Voltage 4ch/unit	MAX 100kS/s (10µs)	Strain Gauge TEDS Sensor	1 WILL SITAIL 940	uge or strain

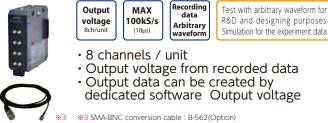

Built-in bridge amp enables direct connection to strain guages Excitation supply for bridge circuit (Constatnt voltage / Constant current)

Supports TEDS sensors

\*1 Conversion connector between DSUB and screw terminal : B-560(Option) \*2 Conversion cable between DSUB and NDIS : B-561(Option)

#### NEW Voltage Output Module GL7-DCO

#### Voltage/Temperature Module GL7-M

мах

100S/s

(10ms)

Sigma-Delta Measurement of internal temperature type A/D converter and working voltage of samples within an environmental test chamber.

- 10ms / 10ch High speed scan method
  - 10 channels / unit
- Variety of input types (Voltage, Thermocouple, RTD)

## High Voltage Module GL7-HV

Voltage/

Temperature

10ch/unit

- High withstand voltage (Maximum input voltage: 1,000V)
- Maximum sampling speed 1MS/s
- Real-time RMS measurement

### Charge Module GL7-CHA

Charge

Voltage

#### NEW

MAX Charge 100kS/s IEPE (10µs)

Acceleration is measured with the general accelerometer which is typically used for vibration tests.

- Charge / IEPE / Voltage type sensor compatible
- The wide variety of filter functions allow high-precision measurements.
- Supports TEDS sensors

## Logic/Pulse Module GL7-L/P

- 16 channels / unit (4channels / 4 slots) Logic : 1MS/s High speed sampling Pulse : 10kS/s High speed sampling

Model number		GL7-V	High Speed Voltage GL7-HSV		
Number of in Input method		10 channels All channels isolated unbalanced input, Simultaneous sampling, Screw terminal (M3 screw)	4 channels All channels isolated unbalanced input, Simultaneous sampling, BNC connector		
Sampling sp	eed (interval)	1 k Samples/s to 1 Sample/h (1ms to 1h)	1 M Samples/s to 1 Sample/h (1µs to 1h)		
Built in RAM Measuremen	t range	2M samples 100, 200, 500 mV,1, 2, 5, 10, 20, 50, 100	V, and 1-5 V/F.S.		
A/D Converte Input impeda		Successive Approximation type, 16 bits (effect 1 M $\Omega$ ± 5 %	ive resolution: 1/40000 of measuring full range)		
Maximum	Between (+) / (-) terminal Between channels	100mV to 1V range: 60 V p-p, 2V to 100V 60 V p-p	range: 100 V p-p		
input voltage	Between channel / GND	60 V p-p			
Maximum voltage	Between channels Between channel / GND	1000 V p-p (1 minute) 1000 V p-p (1 minute)			
Isolation resistance	Between input / GND de rejection ratio	Min. 50 MΩ (at 500 V DC) Min. 90 dB (50/60 Hz, Signal source impe	dapad Max 200.0)		
Frequency re	esponse	DC to 1 k Hz (at +1/-3 dB)	DC to 200 k Hz (at +1/-3 dB)		
Filter (Low pa External dime	ass) nsions (W×D×H)	Off,Line(1.5Hz),5,50,500 Hz(at -3dB 6dB/oct) Approx. 49.2 x 136 x 160 mm (Excluding	Off,Line(1.5Hz),5,50,500,5k,50k Hz (at -3dB 6dB/oct) projections)

Charge Module Specifications

1 Using optional humidity sensor (B-530)
\*2 Remote sensing is not available when a NDIS connector is used When a bridge box is used, the connection needs to be 4-wire or 6-wire full bridge Bridge excitation: Constant current drives a strain gauge type converter or a 4-wire full bridge.
When connecting with a Half bridge (Opposite side), an additional bridge box is required. The shunt calibration is available only when the connection is using a 3-wire, 4-wire quarter bridge, 5-wire full bridge, or 6-wire full bridge.
3 When the built-in in bridge resistance is 1200, the excitation voltage needs to be set it to 1V, 2V, or 2.5V. The gauge type and built-in resistance can be selected by a DIP-SW which is located on the front face of the module.
\*4 The measuring mode is set in each module (16 channels) In Logic mode, up to 7 modules can be attached to one main module. (max. 112ch) In Pulse mode, up to 2 modules can be attached to one main modules. The maximum number of channels are limited to up to 112 channels.
